Weather Station Adjustments

The Weather Station Adjustment triggers below only apply to the watering types **Time Based** and **Virtual Solar Sync**.

Actual Rainfall 24 hr- Choose to suspend watering when the rainfall over the past 24 hours is higher
than the specified amount.
Actual Rainfall 7 days- Choose to suspend watering when the rainfall over the past 7 days is higher
than the specified amount. The threshold of 7 days can be changed to between 1 and 30 days by
clicking on the number.

When setting each zone up in "Zones and Schedules," be sure to check the following boxes to have these triggers apply to your cancellations.
