

Accessories - Hunter Remotes with HPC

The HPC face panel quickly and easily upgrades Pro-C® controllers (PC400 models manufactured since March 2014) to next-generation smart controllers via the Hydrawise platform.

It also allows end users and contractors to manually operate their systems using a Hunter remote and/or smart device to turn on a single zone or program.

There is no need to remove the smart port adapter from the Pro-C controller during the upgrade. The ultra-durable Hunter remote units provide contractors and homeowners with simple, remote-operated manual operation capabilities in the field.

Compatible models include all Hunter remotes:

SRR, ICR, ROAM, and the ROAM-XL.
