

Wireless - Using Hotspots

If you do not have internet access and want to sync your controller settings to your application, you can use your smartphone as a hotspot (temporary wifi connection).

Depending on your smartphone, please use either guide below:

Apple hotspot ^[1]

Android hotspot ^[2]

Once you activate your hotspot, connect the controller to verify the Wi-Fi on the controller is working properly. You can do this by following the steps [here](#) ^[3].

Note: The hotspot provided by Telstra 4GX dongle (Australian region) are not compatible with Hydrawise controllers. These models are manufactured by Huawei.

Models not supported are **Telstra 4GX Wi-Fi Pro** and **Telstra 4GX USB**.

We are currently working with the vendors to make this a compatible device in the future.
