

How do I set global default watering triggers?

Contractors now have an option to set default watering triggers for new customers in the customer wide settings.

When a new controller is created (Contractor Portal only), the controller will automatically get the contractor's default Watering Triggers. If you want to have different settings for a specific controller, then they can be changed in the normal way.

Please view the steps to access this feature:

- 1. Click on the **"Manager"** icon on the upper right hand side, then **"Customer Wide Settings."**
- 2. Click on the **"Default watering triggers"**.

NOTE: The trigger can be turned OFF completely by using the slide bar option within this water trigger section.

□

It is also possible to re-apply Watering Triggers to one or all of your customers if they have changed from the settings in the Contractor Portal:

Please view the steps to access this feature:

- 1. Click on **"Re-Apply Settings"**.
- 2. Choose all controllers or selected controllers to update the changes and select **"OK"**
