

Weather Station Adjustments

The Weather Station Adjustment triggers below only apply to the watering types **Time Based** and **Virtual Solar Sync**.

Actual Rainfall 24 hr- Choose to suspend watering when the rainfall over the past 24 hours is higher than the specified amount.

Actual Rainfall 7 days- Choose to suspend watering when the rainfall over the past 7 days is higher than the specified amount. The threshold of 7 days can be changed to between 1 and 30 days by clicking on the number.

When setting each zone up in "Zones and Schedules," be sure to check the following boxes to have these triggers apply to your cancellations.

Predictive Watering™

Adjust watering based on the following triggers

Don't water when:

- Forecast below 60°F
- 80%+ chance of rain
- Wind above 9mph
- 0.1in+ rainfall last day
- 2.4in+ rainfall last 7 days

[Edit monthly adjustments \(advanced\)](#)

Automatically stop your watering based measurements from your weather stations

Don't water when the last 24hr rainfall is higher than
 0.1 in

Don't water when the last days rainfall is higher than
 3 in
