

# How to Use a Grow In Program

Establishing new turf or plants can sometimes require a special watering program. It is typical to use a **GROW IN PROGRAM** for several waterings per day for the first few weeks. This will ensure that the new turf sod does not dry out and is established into the soil.

The Hydrowise Grow In Program provides a **Standard Mode Program** that allows for custom runtimes, watering triggers, rain sensor activations, multiple start times all with a defined start and end date. This makes it easy to set up a new turf or sod program, then will automatically switch to a normal program on the calendar day selected.

For information on changing to **Standard Mode**, [click here](#) [1].

**Important:** A Grow In Program does not stop additional programs from running as they will run in conjunction with one another. If you want to use a Grow In Program (e.g; new turf), with multiple start times, and want it to finish on Monday the 19th, then you set the **End Date** for the 19<sup>th</sup>. If you want a more permanent program to take over on the 20<sup>th</sup>, then you set up an additional program to start on the 20<sup>th</sup> with **No End Date**.

## Instructional Steps

Sign in to your **Hydrawise account** [2]. Select the (☰) zones icon at the bottom of the app. Select **Zones and Programs** if using a PC.

Select **Programs**. Add a new program by selecting the (☰) icon.

Enter in a **Program Name**, then select the watering type **Time-Based**. Click **Next**.

Choose the **Water Days** (Blue means water). Options are listed below.

- Specific days to water (most common)
- Even or Odd day watering
- Interval days - See the article [here](#) [3] for details

Enter in **Start Times** (Up to six-max), then select **Next**.

Select **Zones**. The edit box will only appear if you check the zone box. Add **Run Times** using the up arrows in the box. When finished here, select **Next**.

Predictive watering adjustments - Adjusted based on your [water triggers](#) [4]

- Monthly adjustments can be made using a chart as well.
- Select **Ok** when adjustments are complete.

Select **Grow In Program**. Choose a start and stop period that the program will run. You also have the option to bypass the sensor as well.

- Start a Program on a certain day
- Stop a Program on a certain day
