## **Verizon Connection Issues**

## **Verizon Connection Issues**

If you receive a "password incorrect" message when using a Verizon router issue, we found that Verizon routers have a feature called **(SON)** Single Organized Network. Self-Organizing Networks (SON) can significantly improve Wi-Fi performance by automatically identifying and fixing Wi-Fi problems. This feature comes checked **OFF** when first installed. Once this service is checked back **ON**, your Hydrawise controller should connect without any issues at all.

Please follow the steps below:

- 1. Open MyFios App.
- 2. Select Wi-Fi settings.
- 3. Select Self-Organizing Network.
- 4. Turn SON On.
